Scrum - Qué es?

- Framework ágil para construir, entregar y mantener productos complejos.
- Diseñado especialmente para equipos pequeños, altamente cohesionados.
- Todo el trabajo sucede en iteraciones cortas llamadas sprints.

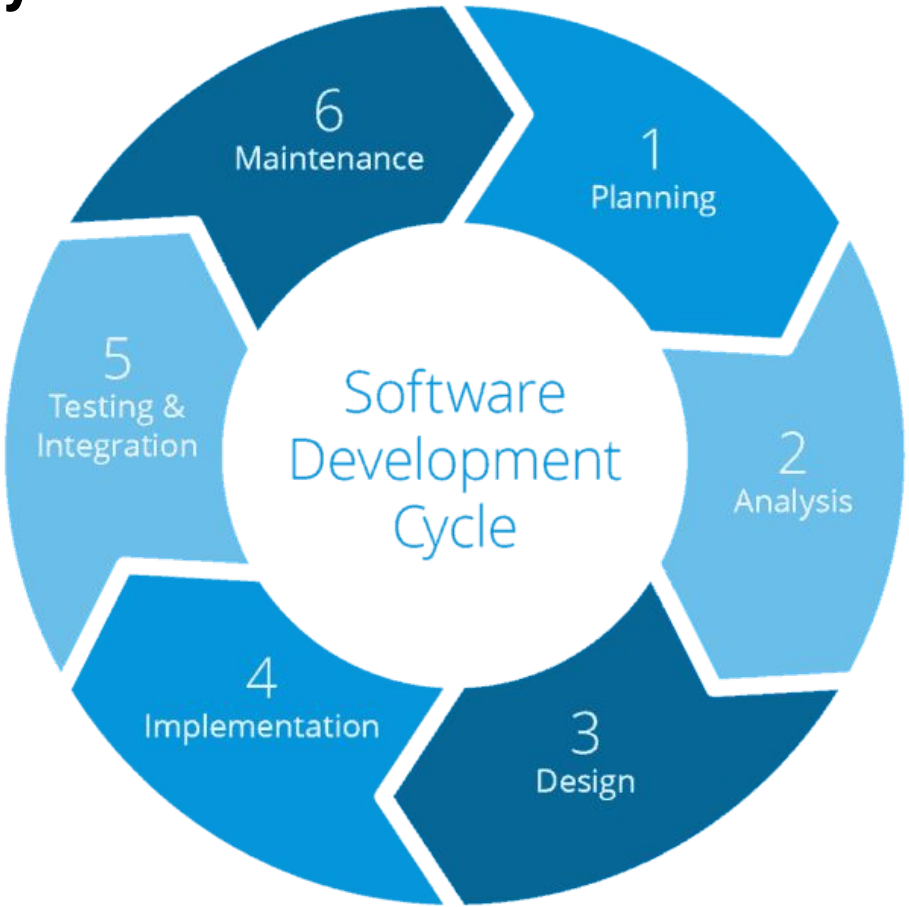
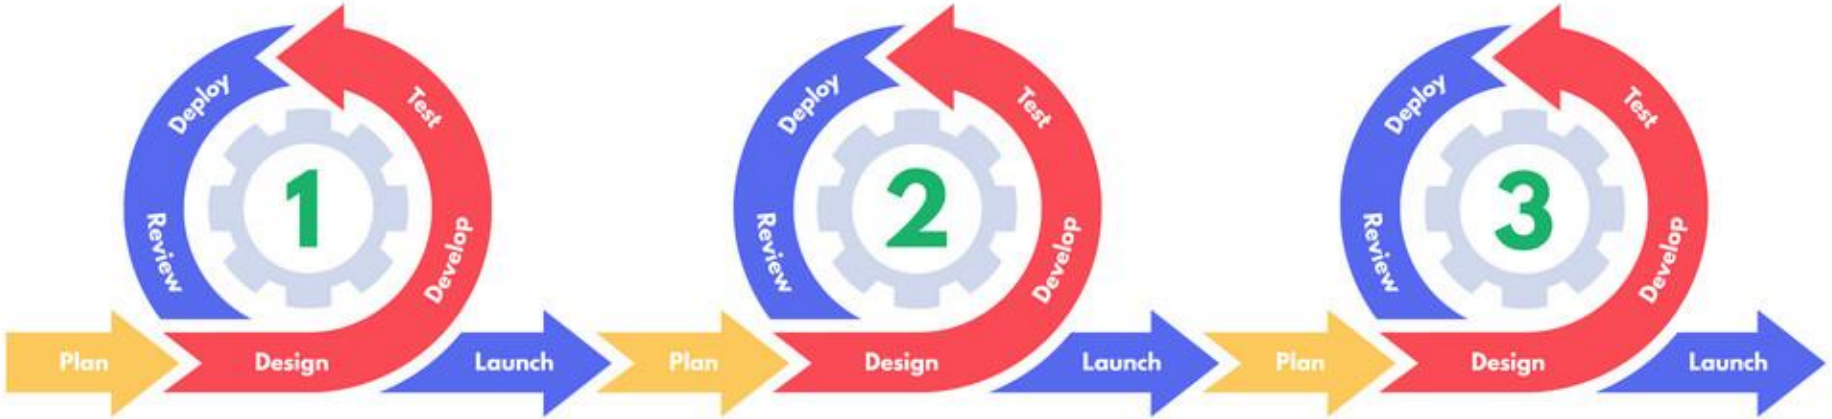
Waterfall vs. Scrum

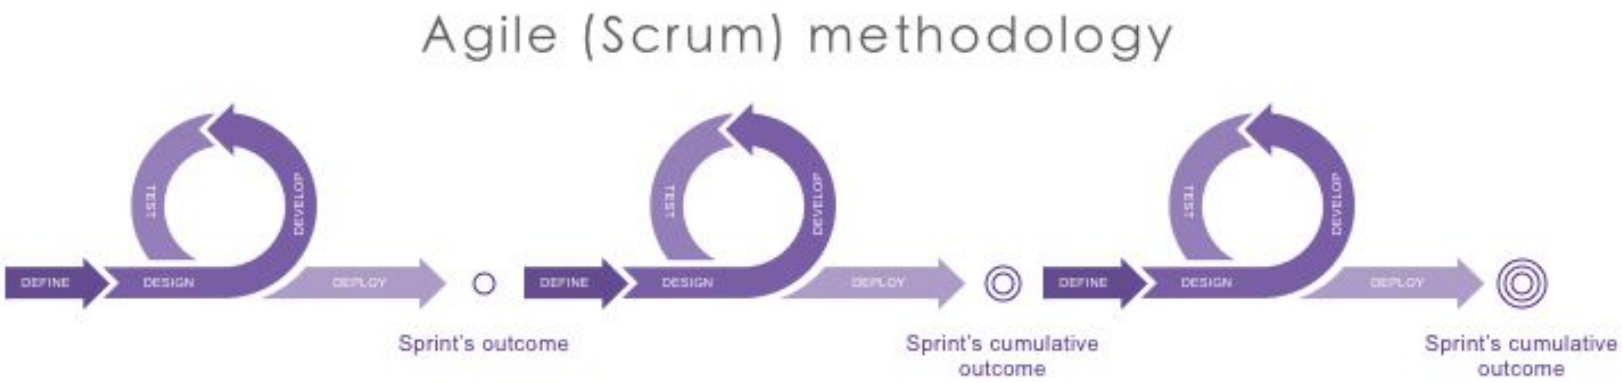
Software Lifecycle

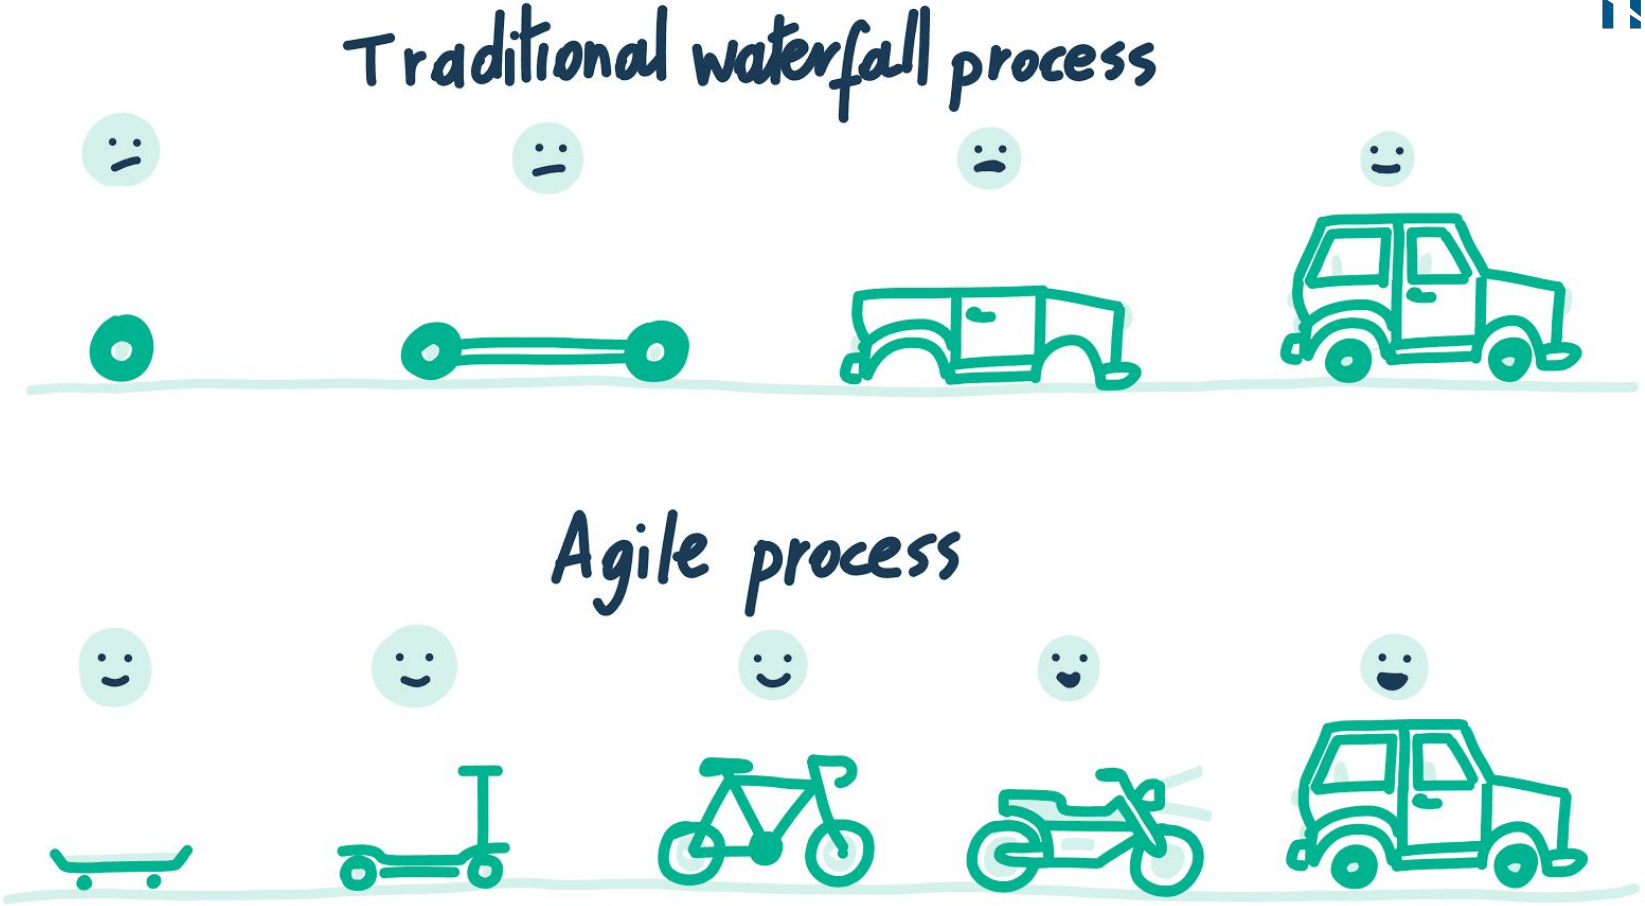


Agile Lifecycle



Waterfall vs. Scrum Lifecycle

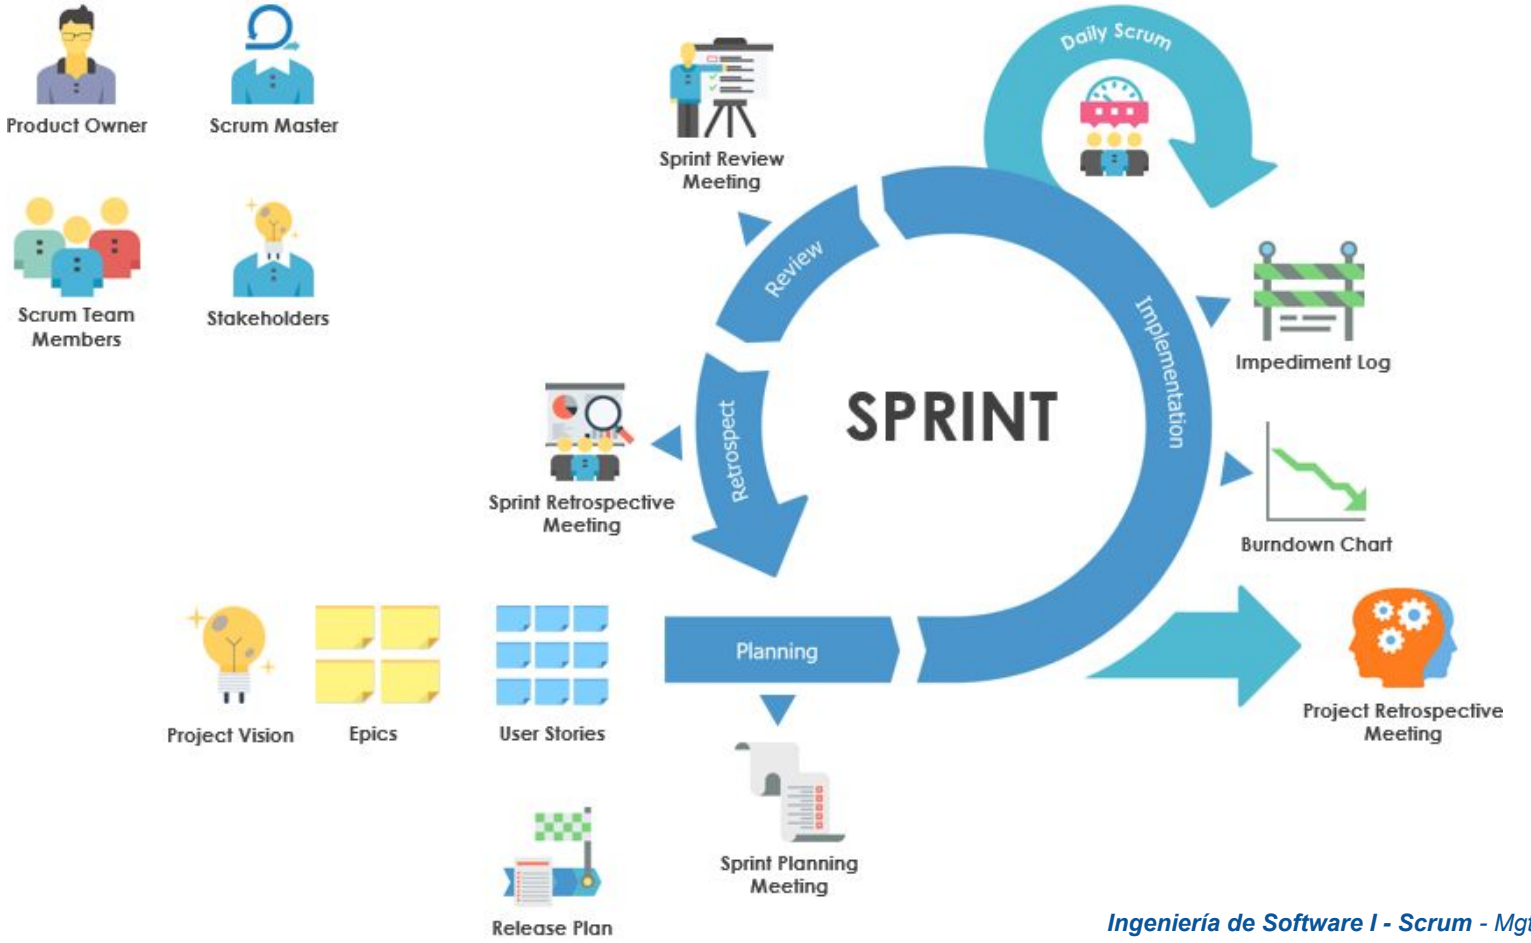




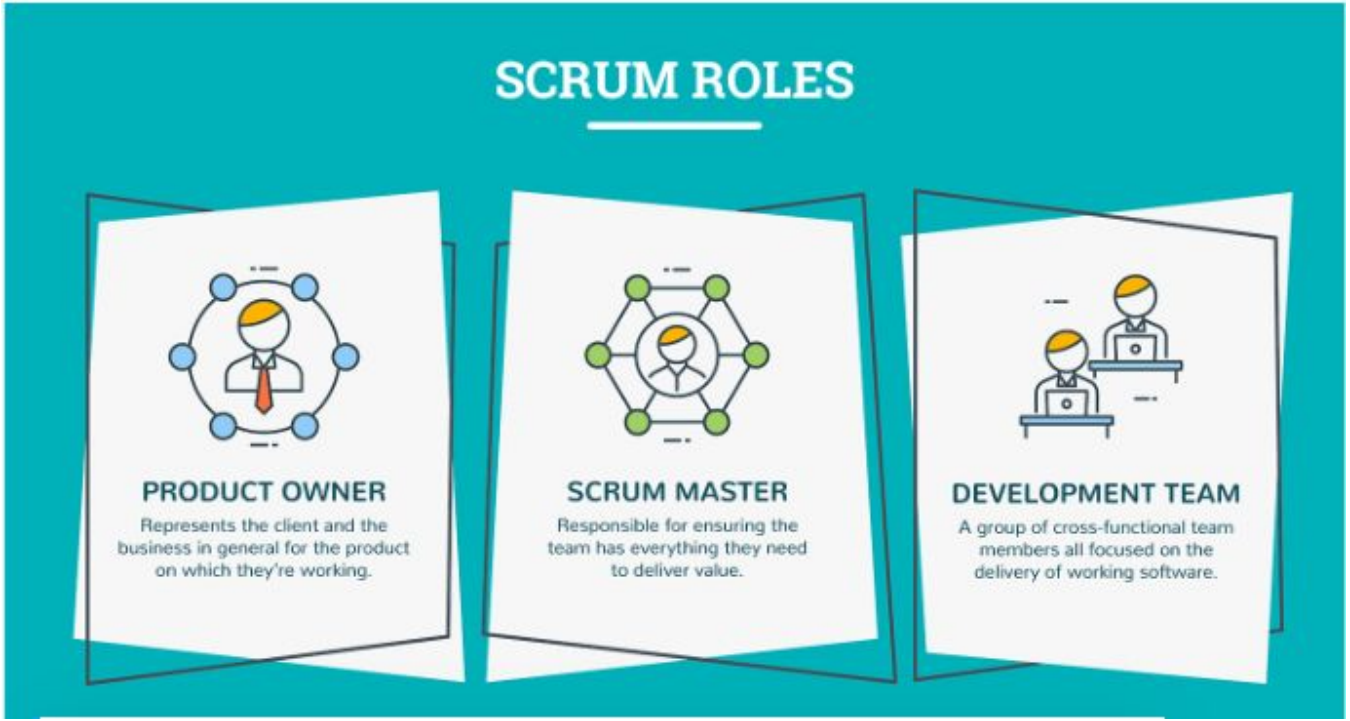
Traditional waterfall process
Agile process

Scrum Roles

The Agile – Scrum Framework



Scrum Roles



SCRUM ROLES
PRODUCT OWNER
Represents the client and the business in general for the product on which they're working.
SCRUM MASTER
Responsible for ensuring the team has everything they need to deliver value.
DEVELOPMENT TEAM
A group of cross-functional team members all focused on the delivery of working software.

Scrum Ceremonies

Scrum Ceremonies

1

SPRINT PLANNING

To craft a Sprint Goal and a plan to achieve it

2

DAILY SCRUM

To review team's progress on Sprint Goal and adjust the plan to get there

3

SPRINT REVIEW

To review the work completed in the sprint with stakeholders

4

SPRINT RETROSPECTIVE

To review the product development process and identify areas for continuous improvements

Scrum Artifacts

Scrum Artifacts

State of Agile Report

Agile Benefits

1. Better **product quality**

Testing is integrated during the cycle, with regular checkups, enabling product changes if needed.

2. **Customer Satisfaction**

The Product Owner is involved in the process, making customers part of the project.

3. More **control on projects**

There is more transparency, short meetings and visibility of every step of the project.

4. **Risk reduction**

The risks of total failure are eliminated as there is constant contact. There is freedom to implement new changes through the process, adapting to the client's needs and preferences.

5. **Faster ROI**

Thanks to agile's iterations, the features are delivered soon, having benefits from the begining while the product is still being developed.

37% faster time to market

16% higher productivity
